

Practice Sheet: MINIFS, MAXIFS, and AVERAGEIFS Functions

This practice sheet helps you master three powerful conditional aggregate functions in Excel: **MINIFS**, **MAXIFS**, and **AVERAGEIFS**. These functions allow you to calculate minimum, maximum, or average values based on one or more criteria. They are very useful for finding the lowest/highest revenue in a specific region and category, average units sold for a product type, etc.

Enter the data below into Excel and complete all steps. The main table contains 50 sales transaction records from TechMart.

Step 1: Set Up the Main Data Table

In Sheet1, starting from cell **A1**, enter the following table.

After entering the data, go to cell **G2**, enter the formula **=C2*D2** and copy it down to row 51. This calculates Total Revenue (Units Sold × Unit Price) for each order. Format column G as Currency.

Product Name	Category	Units Sold	Unit Price (₹)	Region	Order ID	Total Revenue (₹)
Dell XPS 13 Laptop	Laptop	28	89999	North	TM-25001	
iPhone 16 Pro	Smartphone	95	119999	South	TM-25002	
Logitech MX Master 3S Mouse	Mouse	150	8499	East	TM-25003	
Samsung ViewFinity 27" Monitor	Monitor	42	28999	West	TM-25004	
Sony WH-1000XM5 Headphones	Headphones	67	24999	North	TM-25005	
HP Pavilion 15 Gaming Laptop	Laptop	35	72999	South	TM-25006	
Samsung Galaxy Tab S9+	Tablet	58	67999	East	TM-25007	
Keychron K2 Wireless Keyboard	Keyboard	89	6499	West	TM-25008	
Anker Prime 27K Power Bank	Accessories	175	3999	North	TM-25009	
LG 32" Ultra HD Monitor	Monitor	31	35999	South	TM-25010	
Bose QuietComfort Ultra Headphones	Headphones	52	22999	East	TM-25011

HP Victus Gaming Laptop	Laptop	26	79999	South	TM-25046	
Samsung Galaxy Tab S10+	Tablet	43	74999	East	TM-25047	
SteelSeries Apex Pro Keyboard	Keyboard	51	18999	West	TM-25048	
Anker Soundcore Liberty 4	Headphones	78	9999	North	TM-25049	
Dell Inspiron 14 Plus	Laptop	37	69999	South	TM-25050	

Step 2: Calculate Total Revenue

In column G (Total Revenue), enter the following formula in cell G2 and drag it down to G51:

=C2*D2

This multiplies Units Sold by Unit Price. Format the column as Currency (Rs.).

Step 3: MINIFS, MAXIFS and AVERAGEIFS Practice

Answer the following questions below the table. Leave one blank row between questions for readability.

a) Average Units Sold for Mouse category in East region

A53: Avg Mouse - East B53: =AVERAGEIFS(C2:C51, B2:B51, "Mouse", E2:E51, "East")

b) Minimum Unit Price for Headphones in North region

A54: Min Headphones Price - North B54: =MINIFS(D2:D51, B2:B51, "Headphones", E2:E51, "North")

c) Maximum Total Revenue in West region

A55: Max Revenue - West B55: =MAXIFS(G2:G51, E2:E51, "West")

d) Average Total Revenue for Monitor category

A57: Avg Revenue - Monitor B57: =AVERAGEIFS(G2:G51, B2:B51, "Monitor")

e) Minimum Units Sold for Smartphones in South region

A58: Min Smartphone Units - South B58: =MINIFS(C2:C51, B2:B51, "Smartphone", E2:E51, "South")

f) Average Units Sold for Laptops (all regions)

A59: Avg Laptop Units B59: =AVERAGEIFS(C2:C51, B2:B51, "Laptop")

g) Maximum Total Revenue in North where Units Sold > 50

A61: Max Revenue North >50 units B61: =MAXIFS(G2:G51, E2:E51, "North", C2:C51, ">50")

h) Average Unit Price for Storage items in West region

A62: Avg Storage Price - West B62: =AVERAGEIFS(D2:D51, B2:B51, "Storage", E2:E51, "West")

Save your workbook as **Excel_Module18_YourName.xlsx** and submit it to your instructor.
